Designed for live performances as well as pre-production, tracking and mixing in the studio, the plugin's innovative pitch detection and correction technologies ensure that the tuned vocal retains the vocalist's natural vocal sound.. You can control the range, choose a scale, mark in advance specific notes to fix or avoid, control the plugin's sensitivity, and even tune a singer's vibrato while preserving its natural movement.. Waves Tune Real-Time provides smooth, natural-sounding vocal pitch correction instantly and automatically, as soon as the notes leave the singer's mouth.

From Waves Audio: From time-domain effects to equalizers, from dynamics control to noise reduction, from guitar sound modeling to the sound of classic analog components, there has never been such a comprehensive collection as this.. Waves Tune Real-Time is compatible with all Waves SoundGrid applications and eMotion mixers, and can work seamlessly with any live console via MultiRack without the need for complex setups.. If you don't know the scale of the song, you can enter the notes using the virtual keyboard, or set the plugin to follow a melody played in advance or in real time via MIDI.. The intuitive controls, simple layout, and touchscreen compatibility are key for engineers who have little time to fuss around and need to quickly get solid and 'ready-to-go' vocals.. Producers, engineers and performers can use the plugin for subtle pitch correction, but also as a creative pitch quantization effect – all in real time.
